

A Guide to Underground Space Utilization and Planning 2015

CONTENTS

Message	i
Preface	iii
Editorial Committee	v

CHAPTER 1 Background to Develop Underground Space in Japan – Geological Characteristics and Legislations –

Section 1 Geological Characteristics of the Japanese Islands

1.1 Geology of Japan	3
1.2 Topography of Japan	5
1.3 Natural Environment and Disaster of Japan	7
1.3.1 Climate and landslide disaster	7
1.3.2 Earthquake and Disaster	10
1.3.3 Volcanoes and Disaster	11

Section 2 Legislation Systems Related to Underground Space Utilization

2.1 Definition of Land	13
2.2 Road Act	14
2.2.1 Road Facilities	14
2.2.2 Exclusive Use of Road Area	15
2.3 River Act	16
2.3.1 River Control Facilities	16
2.3.2 Exclusive Use of River Area	17
2.3.3 Exclusive Use of River Water	19
2.4 Parks Related Acts	19
2.4.1 Park Facilities	20
2.4.2 Exclusive Use of Park Area	20
2.5 Urban Development Related Acts	21
2.5.1 Planning of Urban Development	21
2.5.2 Facilities of Urban Development	21
2.5.3 Land Use of Urban Development	22
2.6 Three-dimensional Land Use	22
2.6.1 Crossover Roads	23
2.6.2 Crossover Rivers	24
2.6.3 Three-dimensional City Parks	25
2.6.4 Three-dimensional City Planning	26
2.6.5 Deep Underground Space Utilization	26

2.7 Other Legislation Systems	28
2.7.1 Project by Multiple Companies	28
2.7.2 Urban Revitalization Projects	29

CHAPTER 2 Recently Developed Projects of Underground Space Utilization

Section 1 Cases of Commercial and Life-related Infrastructures

1.1 Underground Shopping Malls	33
1.1.1 Tenjin Underground Shopping Mall	33
1.1.2 Underground Walkway Information Service in the District Near the Osaka Railway Station	40
1.2 Integrated Complex and Underground Walkway by Public-private Partnerships	48
1.2.1 Marunouchi Underground Network	48
1.2.2 Development Project of America-Yama (Mountain) Park	57
1.3 Underground Walkways	63
1.3.1 Sapporo Ekimae-dori Underground Walkway	63
1.4 Underground Car Parkings	68
1.4.1 Shinkawa River Underground Car Parking	70
1.4.2 Ueno Chuo-dori Underground Car Parking	74
1.5 Underground Bicycle Parkings	78
1.5.1 East & West Exit Bicycle Parking of Kasai Station in Edogawa Ward	80
1.5.2 Hachijoguchi West and East Exit Bicycle Parking of the Kyoto Station in Kyoto City	84
1.6 Water Works	89
1.6.1 The large-Capacity Transmission Main Project (Kobe City): Okuhirano Construction Section	89

Section 2 Cases of Transport Infrastructures

2.1 Underground Roads	96
2.1.1 Central Circular Route of Metropolitan Expressway - Shinjuku and Shinagawa Routes	96
2.1.2 Soseigawa-dori Underpass Continuation	104
2.1.3 Niigata Minato (Port) Tunnel	110
2.2 Underground Railways	115
2.2.1 Fukutoshin Line of Tokyo Metro	115
2.2.2 Quadruple Line Project of Odakyu Electric Railway Odawara Line	122
2.2.3 Tozai (E-W) Line of Sendai Municipal Subway	129

Section 3 Cases of Urban Redevelopments

3.1 Road Projects and Redevelopment Projects	135
3.1.1 Central Circular Route 2 Shimbashi-Toranomon Area Redevelopment Project	135
3.2 Railway Projects and Redevelopment Projects	141
3.2.1 Minatomirai Line	141

3.2.2	Tokyu Toyoko Line (Shibuya Sta.-Daikan'yama Sta.) Undergrounding Project	146
3.2.3	Traffic Square and Station Front Square of Shin Yokohama Station North Exit	153

Section 4 Cases of Urban Energy Facilities

4.1	District Heating and Cooling (DHC) Facilities	159
4.1.1	Heat Supply Facilities Around Tokyo Station (Otemachi, Marunouchi and Yurakucho Areas)	159
4.1.2	DHC System at Nakanoshima 3 chome in Osaka City	166
4.2	Utility Tunnels	172
4.2.1	Midosuji Street Utility Tunnel	172
4.3	Ground Source Heat Utilization	177
4.3.1	Ground Source Heat Pump (GSHP) System in Quadruple Tracks Project of Odakyu Electric Railway Odawara Line	177
4.4	Facilities with Multiple Energy Systems	184
4.4.1	Heat Supply Project in Tokyo Skytree (TV tower) District (DHC with Ground Source Heat)	184

Section 5 Cases of Energy Facilities

5.1	Underground Petroleum Stockpiling Bases	190
5.1.1	Kuji National Petroleum Stockpiling Base	190
5.2	Underground LPG Stockpiling Bases	196
5.2.1	Namikata National LPG Stockpiling Base	196
5.2.2	Kurashiki National LPG Stockpiling Base	200
5.3	LNG Underground Tanks	203
5.3.1	Ohgishima LNG Terminal, the World's Largest LNG Underground Tank	203
5.4	Natural Gas Pipeline Networks	206
5.4.1	Niigata - Sendai Line	206
5.4.2	Shin Tokyo Line	213
5.5	Natural Gas Underground Storage	219
5.5.1	Sekihara Gas Field	219
5.5.2	Shiunji Gas Field	225
5.6	Underground Power Plants	230
5.6.1	Okinawa Yambaru Seawater Pumped-storage Hydroelectric Power Plant	230
5.6.2	Kyogoku Pumped-storage Hydroelectric Power Plant	238

Section 6 Cases of Disaster Prevention Facilities

6.1	Flood Control Facilities	246
6.1.1	Metropolitan Area Outer Underground Discharge Channel	246
6.1.2	Underground Rivers in the Northern and Southern Parts of Neyagawa and Supplementary Trunk Sewer in the Neyagawa River Basin	252
6.1.3	Kanda River/Ring Road No.7 Underground Regulating Reservoir	259

Section 7 Cases of Cultural and Research Facilities

7.1	Art Museums and Tourism Facilities	265
7.1.1	Otsuka Museum of Art	265
7.1.2	The Takayama Festival Art Museum	270

7.2 Research Facilities.....	278
7.2.1 High-Intensity Proton Accelerator Complex (J-PARC)	278
7.2.2 Super-Kamiokande	287
7.2.3 Horonobe Underground Research Center	292
7.2.4 Mizunami Underground Research Laboratory	296
7.2.5 ANGAS (Advanced Natural Gas Storage System, a Lined Rock Cavern Gas Storage)	300

Section 8 Latest Projects of Underground Space Utilization in Foreign Countries

8.1 Commercial and Life-related Infrastructures	306
8.1.1 Pahang-Selangor Raw Water Transfer Tunnel	306
8.2 Transport Infrastructures.....	308
8.2.1 Strait Crossing Railway Tunnel and Stations in Bosphorus Strait	308
8.2.2 Taoyuan International Airport Access Mass Rapid Transit (MRT) System	311
8.2.3 Kaohsiung Mass Rapid Transit System (KMRT)	313
8.3 Energy Facilities	316
8.3.1 Upper Kotmale Hydroelectric Power Plant	316
8.4 Disaster Prevention Facilities	318
8.4.1 Drainage Tunnel from Khlong Sanseab Canal & Khlong Ladprao Canal to Chao Phraya River	318
8.4.2 West Drainage Tunnel in Hong Kong	321

CHAPTER 3 Future Prospects of Underground Space Utilization

Section 1 Future Prospects in Social and Economic Situations and Underground Space Utilization

1.1 Future Prospects in Social and Economic Situations	325
1.1.1 Population	325
1.1.2 Globalization	326
1.1.3 Energy and Food	326
1.1.4 Global Economy	326
1.1.5 Natural Environment and Disasters	327
1.1.6 Deterioration and Human Induced Disasters by Explosives, Fires and Terrorists	327
1.2 Future Trend of Underground Space Utilization	328
1.2.1 Future Trend of Social Infrastructures	328
1.2.2 Future Trend of Underground Space Utilization	328

Section 2 Future Prospects of Underground Space Application

2.1 Disaster Prevention and Reduction Measures.....	330
2.1.1 Latest Disasters	330
2.1.2 Disaster Cases in Underground Facilities	331
2.1.3 Current Legislation and Regulation System for Disaster Prevention and Reduction Measures	333
2.1.4 Strategy for Issues and Measures of Disaster Prevention and Reduction Based	

on Past Cases	336
2.1.5 Future Prospect Cases of Disaster Measures	340
2.2 Reconstruction of Infrastructures	342
2.2.1 Missing Link of Roads	343
2.2.2 Aging Metropolitan Expressway	346
2.2.3 Urban Landscape	347
2.2.4 Arterial Railway in lieu of Tokaido Shinkansen (Bullet Train)	351
2.3 Energy	353
2.3.1 Development of Natural Gas Infrastructure	354
2.3.2 Carbon-Dioxide Capture and Storage	361
2.3.3 Radioactive Waste Disposal Facilities	363
2.3.4 Geothermal Power Generation	367
2.4 Science and Technology	369
2.4.1 International Linear Collider (ILC)	369
Section 3 Issues and Future Prospects in Underground Space Utilization	
3.1 Population Issues, Measures Against Aging and Development of Safe and Secure Society	377
3.2 Stable Energy Supply	378
3.3 Food and Water Shortage Issues	379
3.4 Disaster Prevention and Reduction Measures	379
3.5 Measures Against Aging Infrastructures and Reconstruction	381
3.6 Environmental Measures (Measures Against Global Warming)	381
3.7 Landscape and Effective Use of Above-ground Space	382
3.8 Development of Competitive Economy and Society	383
3.9 Future Prospects of Underground Space Utilization	384
Afterword	387
